# Digital systems designer

Product · creative tech · automation with intent

## 00 PROFILE

I design tools, experiences and automations that help people think, decide and create with more clarity. I build lightweight, auditable systems with memory — sustainable even on limited hardware and networks, without unnecessary noise.

## 01 SELECTED PROJECTS

### CyberSentinel

Security observability — 2026

A local observability hub that turns scattered system signals into clear, auditable decisions.

`Python` `WinAPI` `PowerShell`

### BizPsy Simulator

Decision design — 2025

A strategy simulator that makes the link between consumer behavior, inventory and cash flow visible.

`Python` `Data models` `Chart.js`

### Aletheia Learning

Learning systems — 2026

A study system that turns dense sources into connectable, reviewable, usable knowledge.

`Python` `Markdown` `Obsidian`

### AetherRadio

Audio infrastructure — 2025

A small continuous broadcast infrastructure designed to run stably with few resources.

`Python` `FFmpeg` `Icecast`

## 02 TECHNICAL SKILLS

**Product & frontend**

`Chart.js` `React` `TypeScript`

**Systems & data**

`Python` `WinAPI` `PowerShell` `Systems` `Data`

**Integrations**

`Markdown` `Obsidian` `FFmpeg` `Icecast` `Three.js`

## 03 WORK PRINCIPLES

01 **Clarity before complexity**
Interfaces that explain what matters before showing what is possible.

02 **Systems with memory**
Products that leave traces, context and recoverable decisions.

03 **Lightweight is a feature**
Solutions that stay sustainable even on limited hardware and networks.

## 04 AVAILABILITY

Open to remote collaborations, contract projects and product / creative tech roles.

Languages: Spanish (native) · English (technical, fluent reading and writing).

## Have an idea *that deserves form?*
